

# Important Notice to Authors

Attached is a PDF proof of your forthcoming article in *Physical Review D*. The article accession code is DNE1027.

Please note that as part of the production process, APS converts all articles, regardless of their original source, into standardized XML that in turn is used to create the PDF and online versions of the article as well as to populate third-party systems such as Portico, CrossRef, and Web of Science. We share our authors' high expectations for the fidelity of the conversion into XML and for the accuracy and appearance of the final, formatted PDF. This process works exceptionally well for the vast majority of articles; however, please check carefully all key elements of your PDF proof, particularly any equations or tables.

Figures submitted electronically as separate PostScript files containing color usually appear in color in the online journal. However, all figures will appear as grayscale images in the print journal unless the color figure charges have been paid in advance, in accordance with our policy for color in print (<http://publish.aps.org/authors/color-figures-print>) and the relevant figure captions read "Color". For figures that will be color online but grayscale in print, please ensure that the text and captions clearly describe the figures to readers who view the article only in grayscale.

***No further publication processing will occur until we receive your response to this proof.***

## Specific Questions and Comments to Address for This Paper

The numbered items below correspond to numbers in the margin of the proof pages pinpointing the source of the question and/or comment. The numbers will be removed from the margins prior to publication.

- 1** NOTE: External links, which appear as blue text in the reference section, are created for any reference where a Digital Object Identifier (DOI) can be found. Please confirm that the links created in this PDF proof, which can be checked by clicking on the blue text, direct the reader to the correct references online. If there is an error, correct the information in the reference or supply the correct DOI for the reference. If no correction can be made or the correct DOI cannot be supplied, the link will be removed.

## Other Items to Check

- Please note that the original manuscript has been converted to XML prior to the creation of the PDF proof, as described above. Please carefully check all key elements of the paper, particularly the equations and tabular data.
- Please check PACS numbers. More information on PACS numbers is available online at <http://publish.aps.org/PACS/>.
- Title: Please check; be mindful that the title may have been changed during the peer review process.
- Author list: Please make sure all authors are presented, in the appropriate order, and that all names are spelled correctly.
- Please make sure you have inserted a byline footnote containing the email address for the corresponding author, if desired. Please note that this is not inserted automatically by this journal.
- Affiliations: Please check to be sure the institution names are spelled correctly and attributed to the appropriate author(s).
- Receipt date: Please confirm accuracy.
- Acknowledgments: Please be sure to appropriately acknowledge all funding sources.
- Hyphenation: Please note hyphens may have been inserted in word pairs that function as adjectives when they occur before a noun, as in "x-ray diffraction," "4-mm-long gas cell," and "R-matrix theory." However, hyphens are deleted from word pairs when they are not used as adjectives before nouns, as in "emission by x rays," "was 4 mm in length," and "the R matrix is tested." Note also that Physical Review follows U.S. English guidelines in that hyphens are not used after prefixes or before suffixes: superresolution, quasiequilibrium, nanoprecipitates, resonancelike, clockwise.
- Please check that your figures are accurate and sized properly. Make sure all labeling is sufficiently legible. Figure quality in this proof is representative of the quality to be used in the online journal. To achieve manageable file size for

online delivery, some compression and downsampling of figures may have occurred. Fine details may have become somewhat fuzzy, especially in color figures. The print journal uses files of higher resolution and therefore details may be sharper in print. Figures to be published in color online will appear in color on these proofs if viewed on a color monitor or printed on a color printer.

- **Overall, please proofread the entire article very carefully.**

## **Ways to Respond**

- **Web:** If you accessed this proof online, follow the instructions on the web page to submit corrections.
- **Email:** Send corrections to [aps-proofs@premediaglobal.com](mailto:aps-proofs@premediaglobal.com). Include the accession code DNE1027 in the subject line.
- **Fax:** Return this proof with corrections to +1.419.289.8923.

## **If You Need to Call Us**

You may leave a voicemail message at +1.419.289.0558 ext. 133. Please reference the accession code and the first author of your article in your voicemail message. We will respond to you via email.

**Erratum: Large- $N$  solution of the heterotic  $CP(N-1)$  model  
with twisted masses

PACS numbers: 11.27.+d, 11.15.Pg, 11.30.Pb, 99.10.Cd

There is a typographical error in Eq. (C8). This equation should coincide with (E27).

Equation (E27) was obtained from normalization of the  $\tilde{\zeta} i \partial_L \zeta$  term in the first line in the first (unnumbered) equation on page 9 of [1] (normalization to unity). The coefficient of this term was not established to order  $O(\delta^2)$ ; the absence of  $O(\delta^2)$  was not verified. In fact, the requirement of holomorphy discussed in [2] implies that an  $O(\delta^2)$  correction is present in the coefficient in front of the  $\tilde{\zeta} i \partial_L \zeta$  term on page 9 of [1], implying that both Eqs. (E27) and (C8) have no denominators, i.e.,

$$\tilde{\gamma}_{(E)} = \sqrt{2}\delta. \quad (1)$$
